

TorcUP E6

Raptor Mobile Lug Nut Station

Power, convenience and safety all rolled into one, the Raptor Mobile Lug Nut Station is a necessary addition to truck and transit maintenance facilities. This mobile workstation consists of the Raptor RP-1000E6 Pneumatic Torque Wrench, RP-FRL Filter/Regulator/Lubricator, and RP-05.10-S2SAR Socket to Socket Reaction Arm all set up on a sturdy wheeled cart for easy mobilization.

Specifically designed for the truck and bus mass transit industries, the RP-1000E6 achieves the recommended torque values as outlined by wheel and rim manufacturers. The 6" integral nose extension is able to reach recessed wheel lug nut applications where nose clearance is an issue. The RP-1000E6 has a torque output of 250 – 1000 Ft/lbs, +/-5% output accuracy and free speed of 25 RPM. When used with the RP-05.10-S2SAR Socket to Socket Reaction Arm, this tool provides PINCH FREE reaction. The RP-FRL Filter/Regulator/Lubricator is attached directly to the cart and comes with a 10' air hose to connect to the tool, while the mobility of the cart allows positioning as close to or as far from your air source as you need.
